

HAUST NETWORK

Concept of a symbiotic network

Symbiotic network is a network that utilizes income on other blockchains to gain benefits for its own users.

For instance, a symbiotic network can proceed node staking rewards from **target blockchains (hosts)** to support its own native currency and enable gasless transactions.

By offering fees close or equal to zero, a symbiotic network can serve as an excellent architecture for micropayment solutions or gas-intensive smart contracts.

What is Haust Network

Haust Network is the pioneering implementation of a symbiotic network.

Haust Network is a layer one, EVM-compatible and it's the only network with native yield for your crypto assets.

Haust yield comes from protocols of liquid staking into different networks. The yield from these decentralised protocols is passed back to Haust users automatically.

Haust offers minimal transaction fees and its own software development kit (SDK) for native integrations with the Telegram messenger.

Haust Network introduces so-called Haustoria — a system of asset management smart contracts deployed across various blockchain networks (hereinafter referred to as donor networks). These contracts are responsible for allocating user funds to high-yield programs (yield farming) within each donor network.

What is native \$HAUST token?

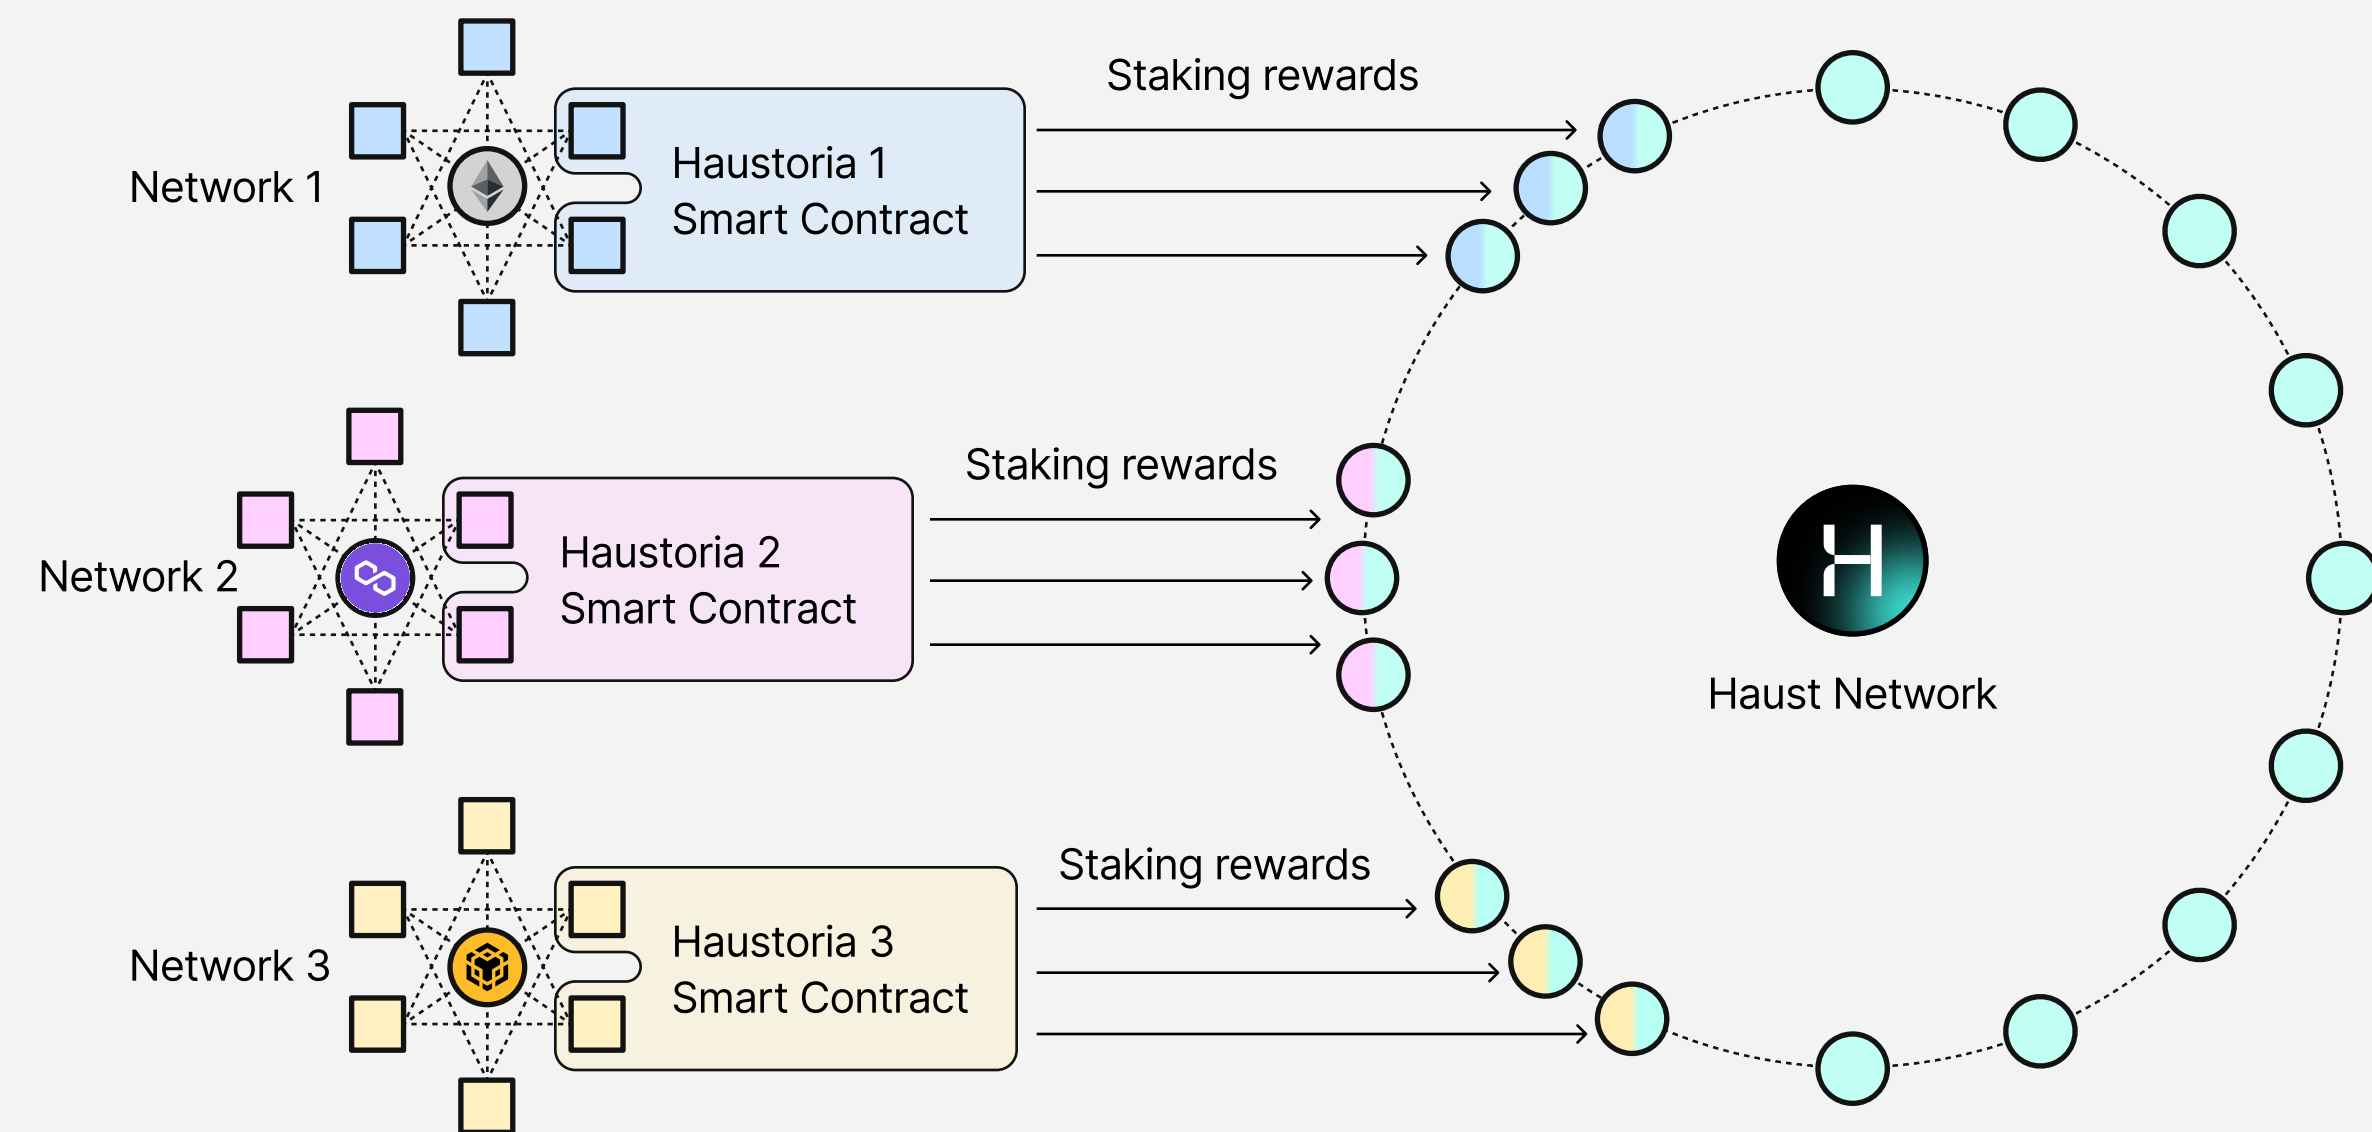

Haust Network is designed to account for the interests of various ecosystem participants and ensure sustainable growth and development of the protocol in the long term.

The native currency of Haust Network, \$HAUST, can be used for:

- Staking to earn passive income and ve-tokens
- Gas fees within the Haust Network
- Collateral in lending protocols
- Participation in governance through ve-tokens
- Access to discounts and bonuses in ecosystem applications
- Access to exclusive NFTs and merchandise for holders

How does the haustoria work?

At first, user deposits funds into the Haustoria contract in one of the donor networks.

Then Haustoria contract distributes the received funds across various yield programs within the donor network according to predefined risk and yield parameters.

In exchange for the deposited funds, the user receives an equivalent amount of tokens (auto rebasing) in the Haust network at a 1:1 ratio.

Haustoria contract distributes the profits among all token holders in proportion to their share, the income is generated from the yield programs.

Easy access in Telegram bot

Haupt's toolkit includes a Telegram wallet-bot, which allows users to quickly connect to Haupt Network blockchain.

Our wallet provides an all-in-one solution, eliminating the need of storing multiple seed phrases for each account. By simply using their Telegram ID and a password, users can access a wide variety of applications Haupt.

Nevertheless, Haupt keeps the opportunity to access our network and its products through any EVM-compatible software such as Metamask or Trust Wallet.

Conclusion

With its user-friendly interface and minimal fees, Haust Network has the potential to onboard millions of Telegram users into the world of cryptocurrencies. Through interacting with comprehensive and intuitive bots, Haust users will get access to the full range of modern DeFi tools simply on their mobile phones.

Developers building on Haust receive a comprehensive toolkit which allows them to launch a whole new project like haustoria from scratch. The core team at Haust will always be dedicated to providing support and guidance to any team interested in becoming an operator.

Haust aims to become the first working implementation of a symbiotic network, enjoying the benefits of being the prime mover in this emerging area of blockchain technology.

Tokenomics

Airdrop: 10%
1,000,000,000 HAUST
for Loyalty Program point holders with a 1-year unlock period

Private: 15%
1,500,000,000 HAUST
for large investors with a 1.5-year unlock period

Public: 5%
500,000,000 HAUST
for the general public through a Balancer LBP auction

Ecosystem: 20%
2,000,000,000 HAUST
for incentivizing developers, users, and partners, distributed through grants and rewards over 5 years

Treasury: 20%
2,000,000,000 HAUST
reserve for strategic initiatives and ensuring the protocol's sustainability, unlocked as needed

Team: 15%
1,500,000,000 HAUST
for the core team and advisors, with a 3-year unlock period

Liquidity: 15%
1,500,000,000 HAUST
for providing initial liquidity on DEXs and CEXs, with a portion immediately available and the rest gradually unlocked over 2 years

Roadmap

■ Q4 '24

Mainnet launch

- Deployment of the network based on PoS consensus
- Integration with Ethereum, Polygon, and Binance Smart Chain blockchains
- Launch of Haustoria contracts in each network
- Integration with social networks and messengers (Telegram, WeChat)
- Launch of a mobile wallet with user-friendly UX and fiat onramp
- Security audits
- Listing of HAUST token on major DEXs

■ Q1 '25 — Q2 '25

Ecosystem expansion

- Integration with Solana, Avalanche, and Fantom blockchains
- Launch of a grants program for developers
- Integration with Chainlink and Band Protocol for oracles
- Partnerships with leading DeFi protocols (Aave, Curve, Compound)
- Expansion of liquidity pools and listing on CEXs

■ Q4 '25 — Q1 '26

Infrastructure development

- Launch of a cross-chain bridge for fast asset transfer between networks
- Integration with privacy protocols (Aztec, Tornado Cash)
- Launch of an NFT marketplace for trading gaming and collectible items

■ Q2 '26 — Q3 '26

Mass adoption

- Global marketing campaign to attract mainstream audience
- Partnerships with payment systems and banks for offramp solutions
- Launch of governance through ve-tokens

■ '27+

Long-term vision

- Establishment of Haust Network as a leading cross-network liquidity aggregator
- Integration with major decentralized financial systems
- Development of the community and decentralized governance
- Expansion into DeFi, NFT, metaverse, GameFi, and SocialFi spheres
- Global adoption of Haust Network as a new standard for open finance

Let's discuss
